

**TO THE HONOURABLE OF MEMBERS OF THE HOUSE OF REPRESENTATIVES IN THE
PARLIAMENT ASSEMBLED**

This petition from the residents of Australia and the international community

Draws the attention of the Australian Government:

To the class 2 pest classification of dingoes in Queensland, (which is the same level as cane toads) the dingoes classification as pests in NSW, VIC, WA, ACT and SA, and the management of the unique Fraser Island dingoes.

WE the undersigned petitioners call on the Australian Government to act urgently to:

1. Develop and implement a NATIONAL DINGO CONSERVATION PLAN
2. Re-classify dingoes in Queensland and other Australia states, listed above, as a native species removing the pest classification.
3. Cease BAITING 1080 and all poison baiting based on current research which shows that non-lethal methods of control are far more successful
4. End the unjustly cruel management of dingoes on Fraser Island. In addition, pertaining to Fraser Island, we request Government to:
 - * Cease ear-tagging for young dingoes under twelve months of age
 - * Cease destruction of juvenile dingoes (pups) less than 12 months old
 - * Introduce random food drops for dingoes during whelping season
 - * Renew the historic symbiotic relationship we once had with dingoes
 - * Permanently cease hazing
 - * Transition from a 'fear-based' management program to one of education, ie: 'calm people = calm dingoes'
 - * Teach people how to successfully behave around dingoes and initiate genuine research into the current theory of feeding = habituation = aggression
